

# Class 103 One Microscopy Slide

All good efforts – thank you for entering.

## Entry No. 1 **1st**

Lime Pollen. Pollen grains evenly distributed and well stained. Mountant evenly spread. To be picky there is a hair and a little bit of dirt otherwise an excellent slide.

## Entry No. 3 **2nd**

Vipers bugloss. A nicely presented slide. There are some air bubbles and some specks of dirt.

## Entry No. 4 **3rd**

Fuschia magellanica. A nice slide but perhaps a little over-stained. Pollen grains are a little sparse and appear in clumps.

## Entry No. 2 **VHC**

Phacelia from a bee pollen load. Another nice slide but also a little over-stained. Again the pollen grains are a little uneven in spread and there are some clumps of pollen.
